

# Trust The Price-Performance Leader in the Simulation Industry

SimWalk is widely recognized as the price-performance leader in the pedestrian simulation market, combining state-of-the-art technology and flexibility with competitive pricing.

SimWalk provides customized pedestrian simulation solutions for your application domain (SimWalk Transport for public transport, SimWalk Airport for aviation and SimWalk PRO for traffic and evacuation), and not a one-size-fits-all software approach.

We believe that in a complex world the one-size-fits-all approach is flawed, and simulation software has to adapt to the specific needs of its customers. That's why we deliver software solutions for different domains where you get exactly what you need, and

## Why SimWalk ?

SimWalk is a leading and comprehensive pedestrian simulation solution that includes more than a decade of research and successful deployment by transport, aviation and security industries. High-end pedestrian simulation technology, customized solutions and excellent support are the cornerstones of SimWalk solutions.

## Products

The products available are SimWalk Transport (for public transport), SimWalk PRO (for urban planning and evacuation), and SimWalk Airport (for aviation). SimWalk DEMO is an entry version to pedestrian simulation.

nothing else. A customization approach to simulation software allows to integrate more specific user feedback and features that make sense for one domain and not for the other, thereby reducing inefficiencies for customers.

In addition, domain customization allows to specifically cooperate with powerful partners in each domain which increases the value of the software for our customers.

Pedestrian simulation is our core business. As specialists, we aim to be leaders.

We concentrate on the business of pedestrian simulation. It allows us to focus exclusively on better algorithms, stronger performance and higher usability, without any compromise.

Together with our research partners we are committed to improve the technology of pedestrian simulation further to increase the value and benefit of it for our customers.

Our customers can be assured that, as specialists, we are always at the forefront of developments in simulation technology and services. Since we believe in the benefits of pedestrian simulation, we are also committed to bring the technology to students and universities, to all the engineers and professionals who will shape our future environment.

Support is our passion. Get an answer to your problem within 24 hours.

We know that by using a complex technology, support is - alongside the software - the single most important factor for our customers to be successful.

We provide different support channels (e-mail, phone, desktop sharing, webinars etc.) for problem specific help and try to respond within 24 hours. We believe that usability is a part of support: the better the usability of a software, the better customers are supported to be successful. It is a main focus of our work to offer innovative usability solutions to enhance ease of use.

Integration is our credo. We believe in cooperation, thriving together with our partners.

Value added partnerships are at the core of our product (e.g. OpenTrack, MatSim etc). They extend and broaden the value and applicability of pedestrian simulation in different directions.

We provide a full range of consulting services from training to model development, cooperating with our customers so they deliver their projects in time and within budget.
